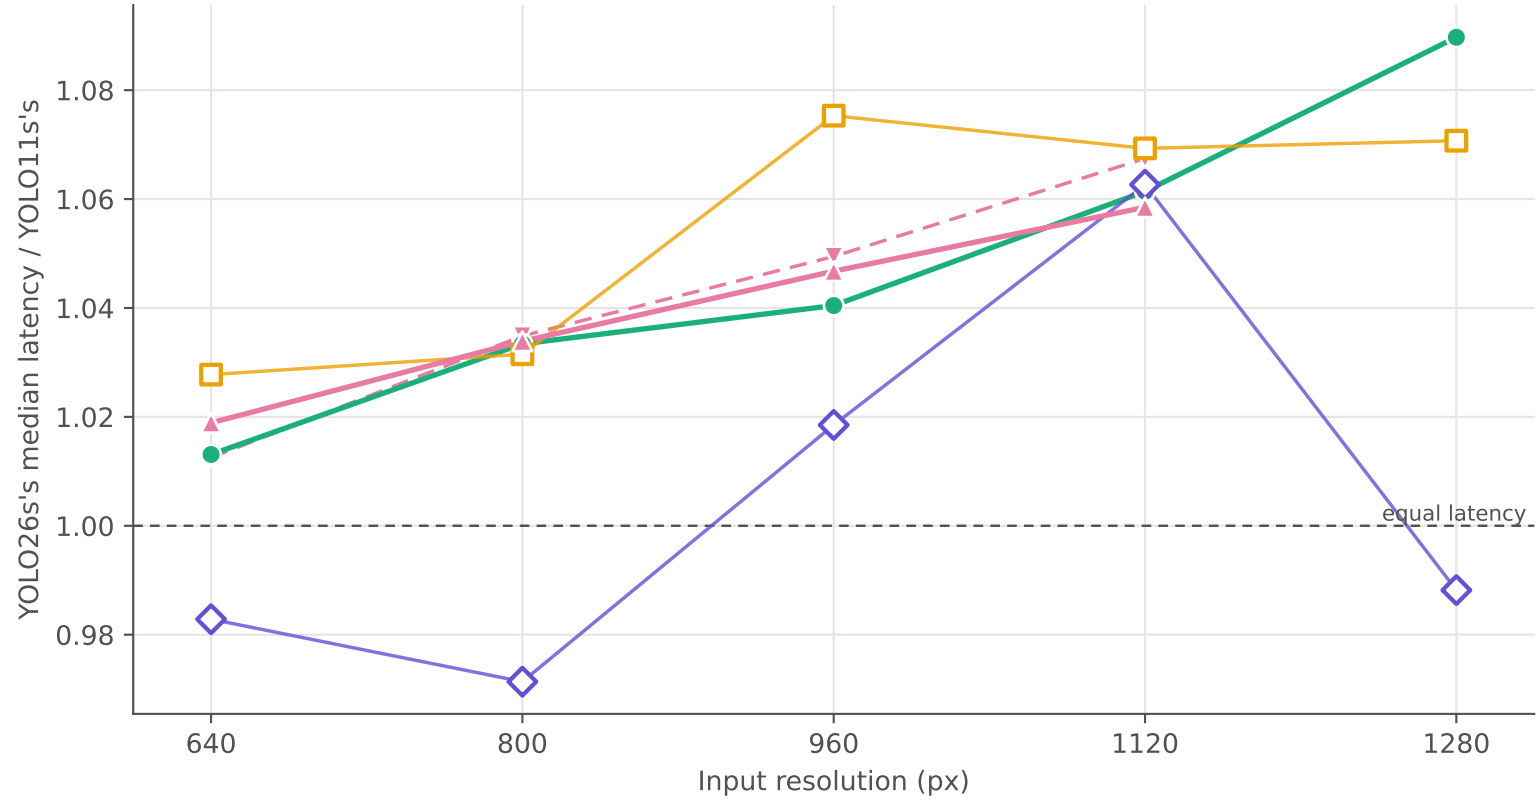
YOLO26s's latency against YOLO11s's on the Raspberry Pi 5, by input resolution


Same configuration, runtime and precision: the baselines (FP32, NCNN FP16) and the quantized cells (INT8).
One-to-many head, 2000 MHz.
The clean comparisons, with no image below 2000 MHz: NCNN FP16, ONNX Runtime INT8 (per-channel), ONNX Runtime INT8, stock.
