NMS time against image content on the Pi 5: yolo26s-640-s0 at 640, ONNX Runtime INT8, 1,610 VisDrone test-dev images
Line: median of the images in a bin (10 bins of about equal size); band: interquartile range.
(a) Against objects per image (ground truth)
(b) Against candidates entering NMS
Post-processing time per image (ms)
Objects per image (ground truth)
Candidates entering NMS, at 0.001 (evaluation threshold)
(the one-to-many head's count on the same image, for both heads)
One-to-many head, post-processing at 0.001 (evaluation threshold)
One-to-many head, post-processing at 0.25 (deployment threshold)
NMS-free head, post-processing at 0.001 (evaluation threshold)
NMS-free head, post-processing at 0.25 (deployment threshold)
